

Support

Video content, Which video content formats are supported?

Olomagic video content supports the following formats: H264, MPEG, MP4, AVI

What is the maximum duration of the holograms?

There is no limit but the duration of the videos are generally somewhere between 30 and 60 seconds and they always play a loop on the same video.

Can I play more than one video on the USB card?

It is possible to play many videos on the USB card and it plays in alphabetical order. There you can use your favourite videos and when the movie has finished playing, it will start playing from the first video again.

Does the hologram display use sound?

The holographic display uses sound and you can use it if you like by adjusting the volume with the remote control.

Can I use the interactive holographic Display?

Normally this is not possible with the standard machine but there is a HDMI input for interactivity. There you can use it with a computer connection and create interactive applications.

Can I get components easily replaced?

All the holographic machines have components that can be easily replaced. In these cases contact us for more information.

Can I use my computer or media player to play content?

This is possible just by using a HDMI input connection to Olomagic.

How can I create holographic content?

You can use any video software tool to create content as normal video. You just need to fit the video to the Display projection. Please go to the 3d content site and review the content brochure.
